

NGUYEN THE TAM

AI Engineer Intern — LLM · AI Agents · Backend · Python
Bac Tu Liem, Hanoi | 0386 312 564 | thetam2103@gmail.com | [LinkedIn](#) | [GitHub](#)

TECHNICAL SKILLS

AI & LLM: Dify AI (Chatbot, Workflow, Agent), LLM integration, AI Agent design, prompt engineering, fallback strategy
Backend: TypeScript, Node.js, NestJS, Hono, Express.js, RESTful API Design, Clean Architecture, JWT Authentication, RBAC, Socket.IO
Database: PostgreSQL, MongoDB, Drizzle ORM, TypeORM, Mongoose
Tools: Docker, Docker Compose, Git/GitHub, Swagger/OpenAPI, Postman, Cloudflare Workers, Vercel, Render, Cloudinary, Playwright
Familiar: Python, React 18, Next.js, Tailwind CSS, Stripe API
Languages: English (technical reading & writing) | Japanese JLPT N5

PROFESSIONAL EXPERIENCE

Back-end Developer Intern | **CONG TY CO PHAN ESG TECH** | Nov 2025 – Apr 2026

- Contributed to backend API development using Hono framework on Cloudflare Workers for an ESG Reporting platform — converting raw environmental/social/governance data into XBRL-compliant reports.
 - Worked with PostgreSQL via Drizzle ORM to manage data models for GRI metric mapping, organization data, and report generation workflows.
 - Integrated Dify AI workflows to automate GRI standard mapping and qualitative assessment scoring within the data processing pipeline.
-

PROJECTS

DATN Social — AI-powered Real-time Edu-Social Platform | [GitHub](#) / [Demo](#)

Stack: NestJS 11, TypeScript, PostgreSQL, TypeORM, Socket.IO, Dify AI, Docker Compose, Cloudinary, Swagger/OpenAPI, Vercel, Render

- Designed and integrated 3 Dify AI workflows — an LLM-powered content chatbot, an automated caption & hashtag generator, and a toxic content detection agent with a fallback-to-Gemini strategy on timeout.
- Built the AI tools module as a standalone NestJS service exposing clean REST endpoints, enabling other platform features to consume AI capabilities via internal API calls.
- Architected a modular backend across 11 feature modules backed by 17 PostgreSQL entities, with JWT authentication and 3-tier RBAC (user/admin/system); documented all 81 API endpoints via Swagger/OpenAPI.
- Implemented dual Socket.IO gateways for real-time 1-1 messaging (5 events) and push notifications; containerized with Docker Compose and deployed across Vercel and Render.
- Wrote 7 unit test suites covering auth, post, chat, engagement, admin, and AI service modules.

Food Delivery Website — Full-stack E-commerce Application | [GitHub](#) / [Demo](#)

Stack: Node.js, Express.js, MongoDB, Mongoose, Stripe API, JWT, Bcrypt, Cloudinary, Docker Compose, Vercel, Render

- Built 14 RESTful API endpoints across 4 route groups (user, food, order, cart) with JWT authentication, Bcrypt password hashing, and role-based middleware for customer and admin access separation.
 - Implemented Stripe Checkout session creation and server-side payment verification — cross-checking payment_status against order state to prevent client-side tampering.
 - Developed an Admin Dashboard for order management, food catalog CRUD with Cloudinary image upload, and business monitoring; containerized with Docker Compose and deployed on Vercel and Render.
-

EDUCATION

Hanoi University of Mining and Geology | B.S. Information Technology | 2021 – 2026 (Expected: 2026)
